Arkturus System Migration Starter Pack

For anyone about to embark on a major system change – be it ERP, MRP, CRM or similar project.

Process mining is designed to support enterprise wide change where it's critical not to transfer process inefficiencies or missteps into the new system. That means system improvements need to be identified before you migrate, including making sure you capture **every** opportunity for additional automation

It's important to accurately identify and understand the systems and processes you are looking to transfer at the very start of the project. It de-risks vendor and solution selection, minimizes the potential for custom development 'surprises' and means you won't waste time and budget migrating inefficient, broken or redundant processes.

Roles typically interested in the System Migration Starter Pack

CIOs, CTOs, CFOs, Programme Managers, Operations Managers, ERP consultants, business transformation specialists and change managers.

What you get for your Starter Pack

- Mining of one simple business process across your business including data loading and processing.
- Full set of dashboards detailing the current state so you can truly understand the process you're looking to change /migrate.
- Full, interactive, process variation analysis tool to assist with the creation of requirements, system design and test plans for the new platform.
- Presentation of an "Insights Pack" to your key stakeholders at a workshop run by the project consultant, including key improvement initiatives you can apply.
- 90-day subscription to Arkturus tools deployed.
- Training for the Arkturus process mining platform and methodology.
- All-inclusive pricing, with over 100 hours of time for a data scientist, data engineer and project consultant (your key point of contact). Pricing is dependent on an assessment of complexity and requirements.

   Note: Starter Pack assumes the same data set will be used for pre and post measurement.

The Arkturus 7-Step Approach

Typically delivered in
30 days
dependent on the availability and responsiveness of your team

1 **PLAN:** Project-start meeting with your key stakeholders, Arkturus project lead and data scientist to agree scope, objectives, resources and timing. A written project charter will be signed off by all parties

2 **DISCOVER:** Indepth sessions with your subject matter experts and relevant technical people to capture an overview of the process and identify available data sources.

3 **DEFINE:** Your Arkturus data scientist defines the data requirements – this is validated by your key stakeholders and the data is extracted.

4 **VISUALISE:** The data extracts are processed by the Arkturus Process Mining platform and the Arkturus Data Scientist produces initial process visualisations.

5 **VALIDATE:** The initial process visuals are validated with your subject matter experts / stakeholders. Any adjustments required are made by the Data Scientist. **An Insights workshop with your key stakeholders is booked five working days from this point**

6 **INSIGHTS WORKSHOP & KNOWLEDGE TRANSFER**: We work with your team to understand and flesh out the key insights that align with the project objective. Training is provided on the Arkturus platform and methodology, which will be customised to your way of working. The Starter Project dashboards, interactive models and insights are presented at the Insight Workshop with your key stakeholders. Process improvements that could be made during the system migration are identified at this meeting.

7 **ACTION:** The Arkturus platform is used during the 90-day period to assist with analysis and measurement while the initiative is implemented

What happens once your starter project is finished?
The next steps are identified during the 90-day subscription period. These can include:

- **Continue**: use Arkturus to check the process implementation in the new system. This enables you to analyse the process implementation in detail, avoiding issues when you cut over to the new system.
- **Expand**: increase the scope for Arkturus to provide more resource to assist with other project deliverables (depending on internal resource capacity)
- **Duplicate**: run another Starter Pack project for a difference process – we don't put a limit on how many 'Starter Packs' you can run.

Note: additional resource and/or subscription costs to be advised.
